

UI functionality

Section eight

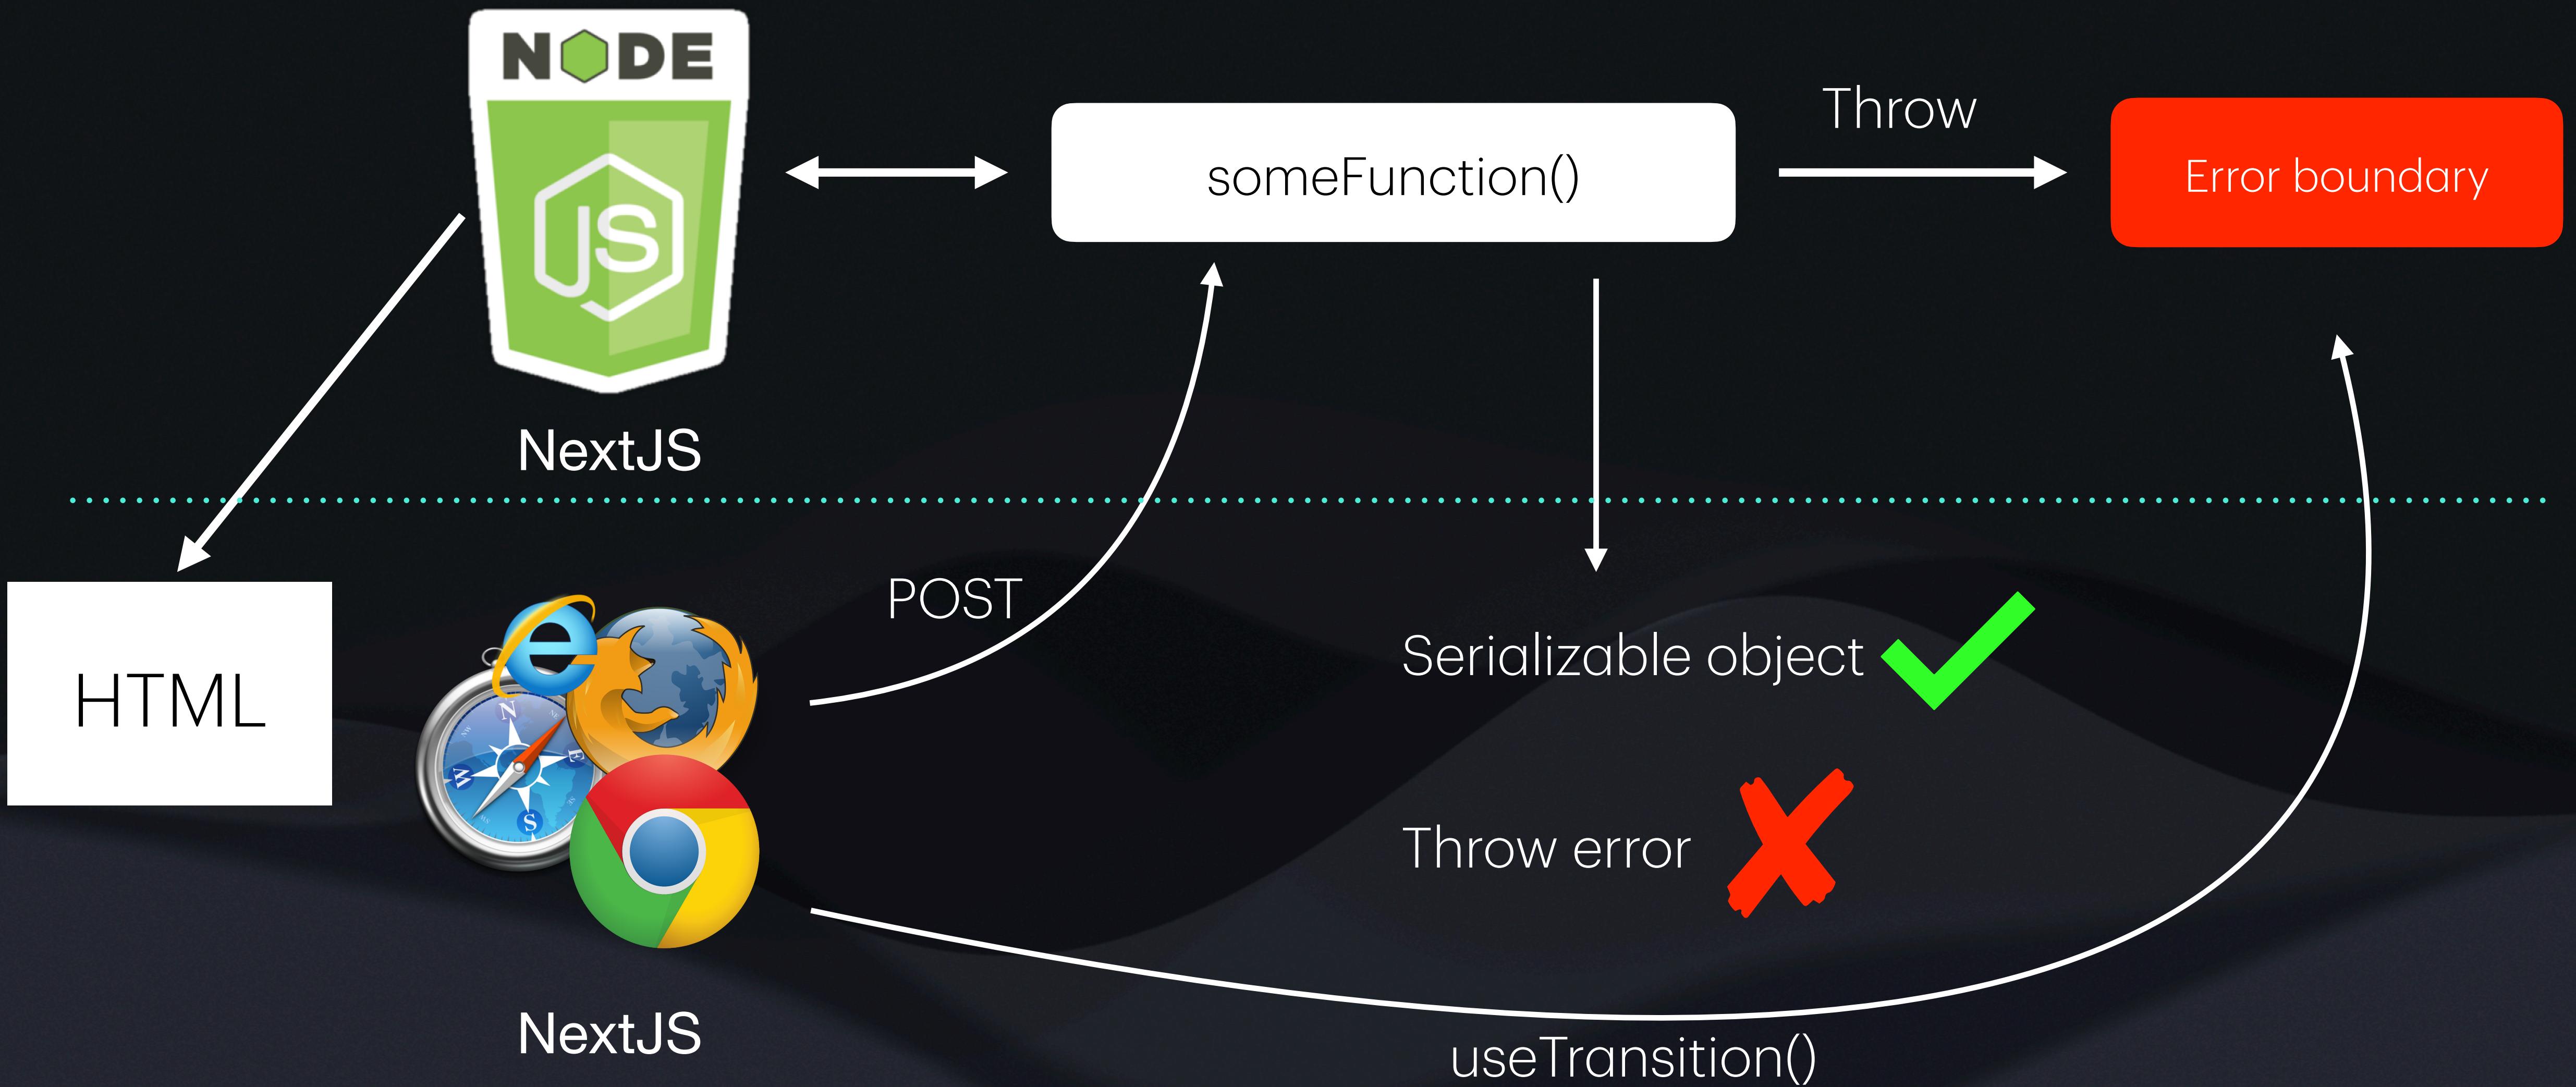

The goal of this
section

To be able to handle errors effectively in
the NextJS app, for both server and client
side functions

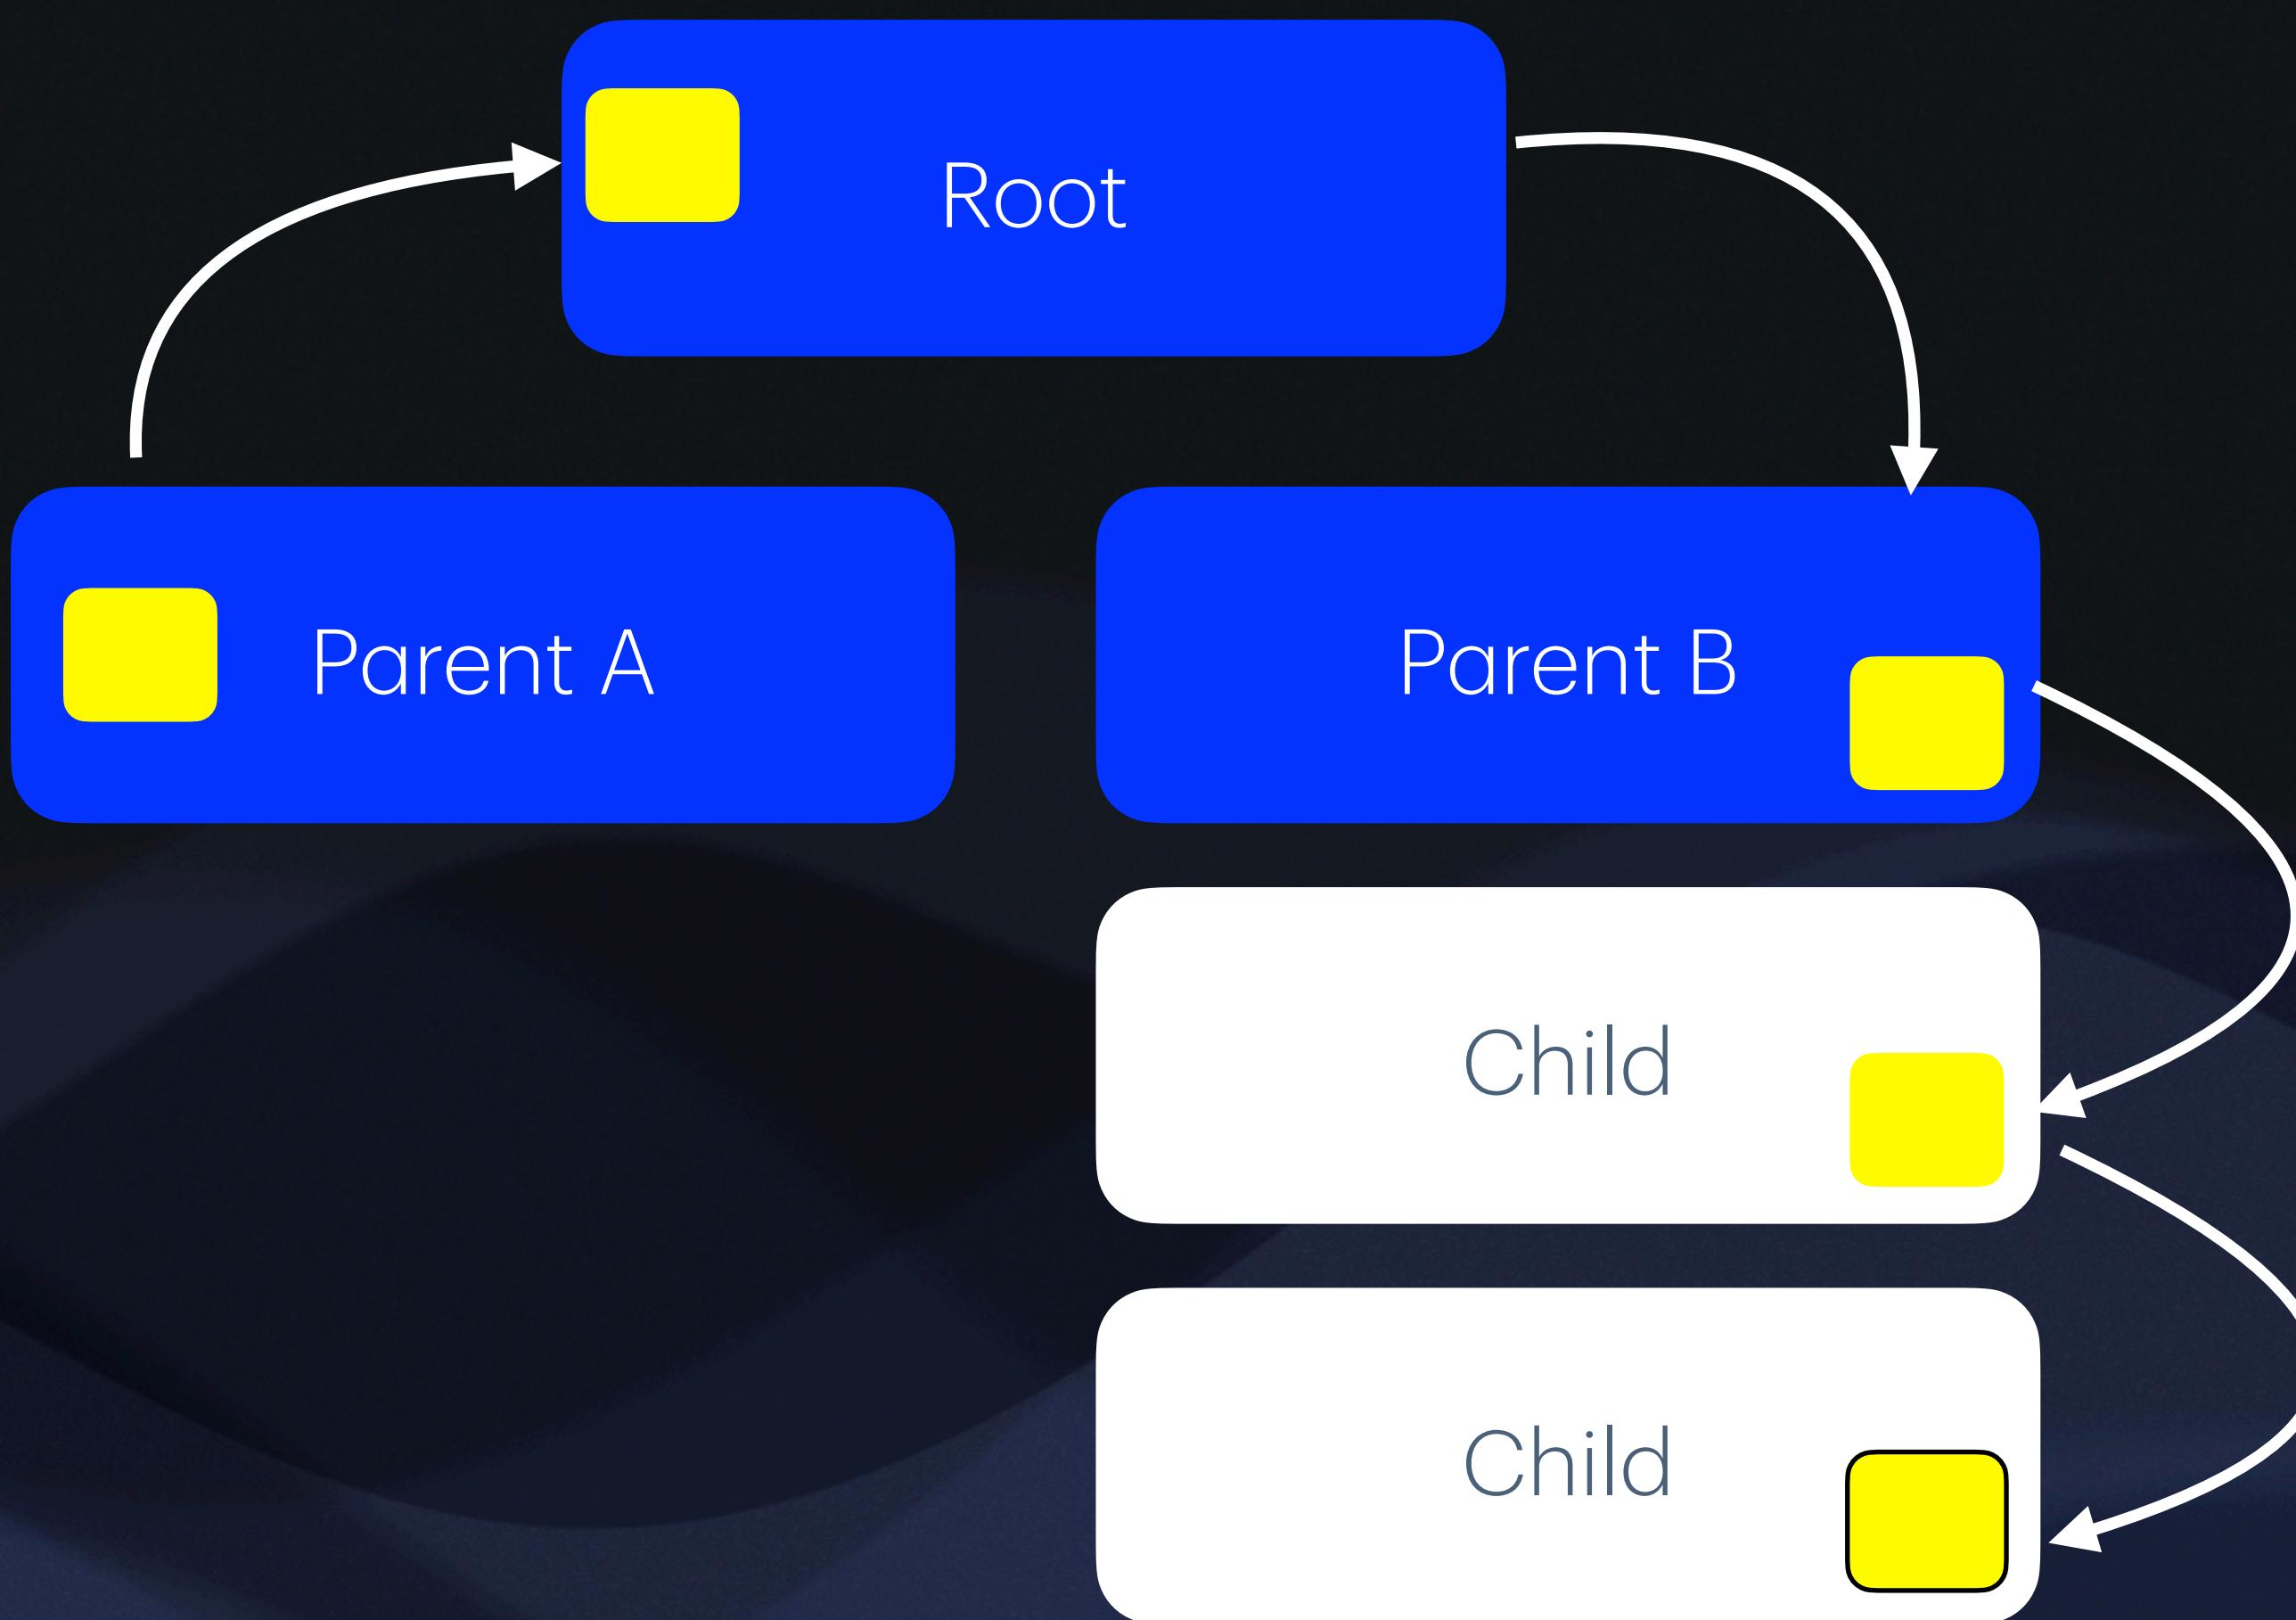

To complete the functionality that does
not require auth in the client app -
anything that reads data

NextJs error handling

useState()

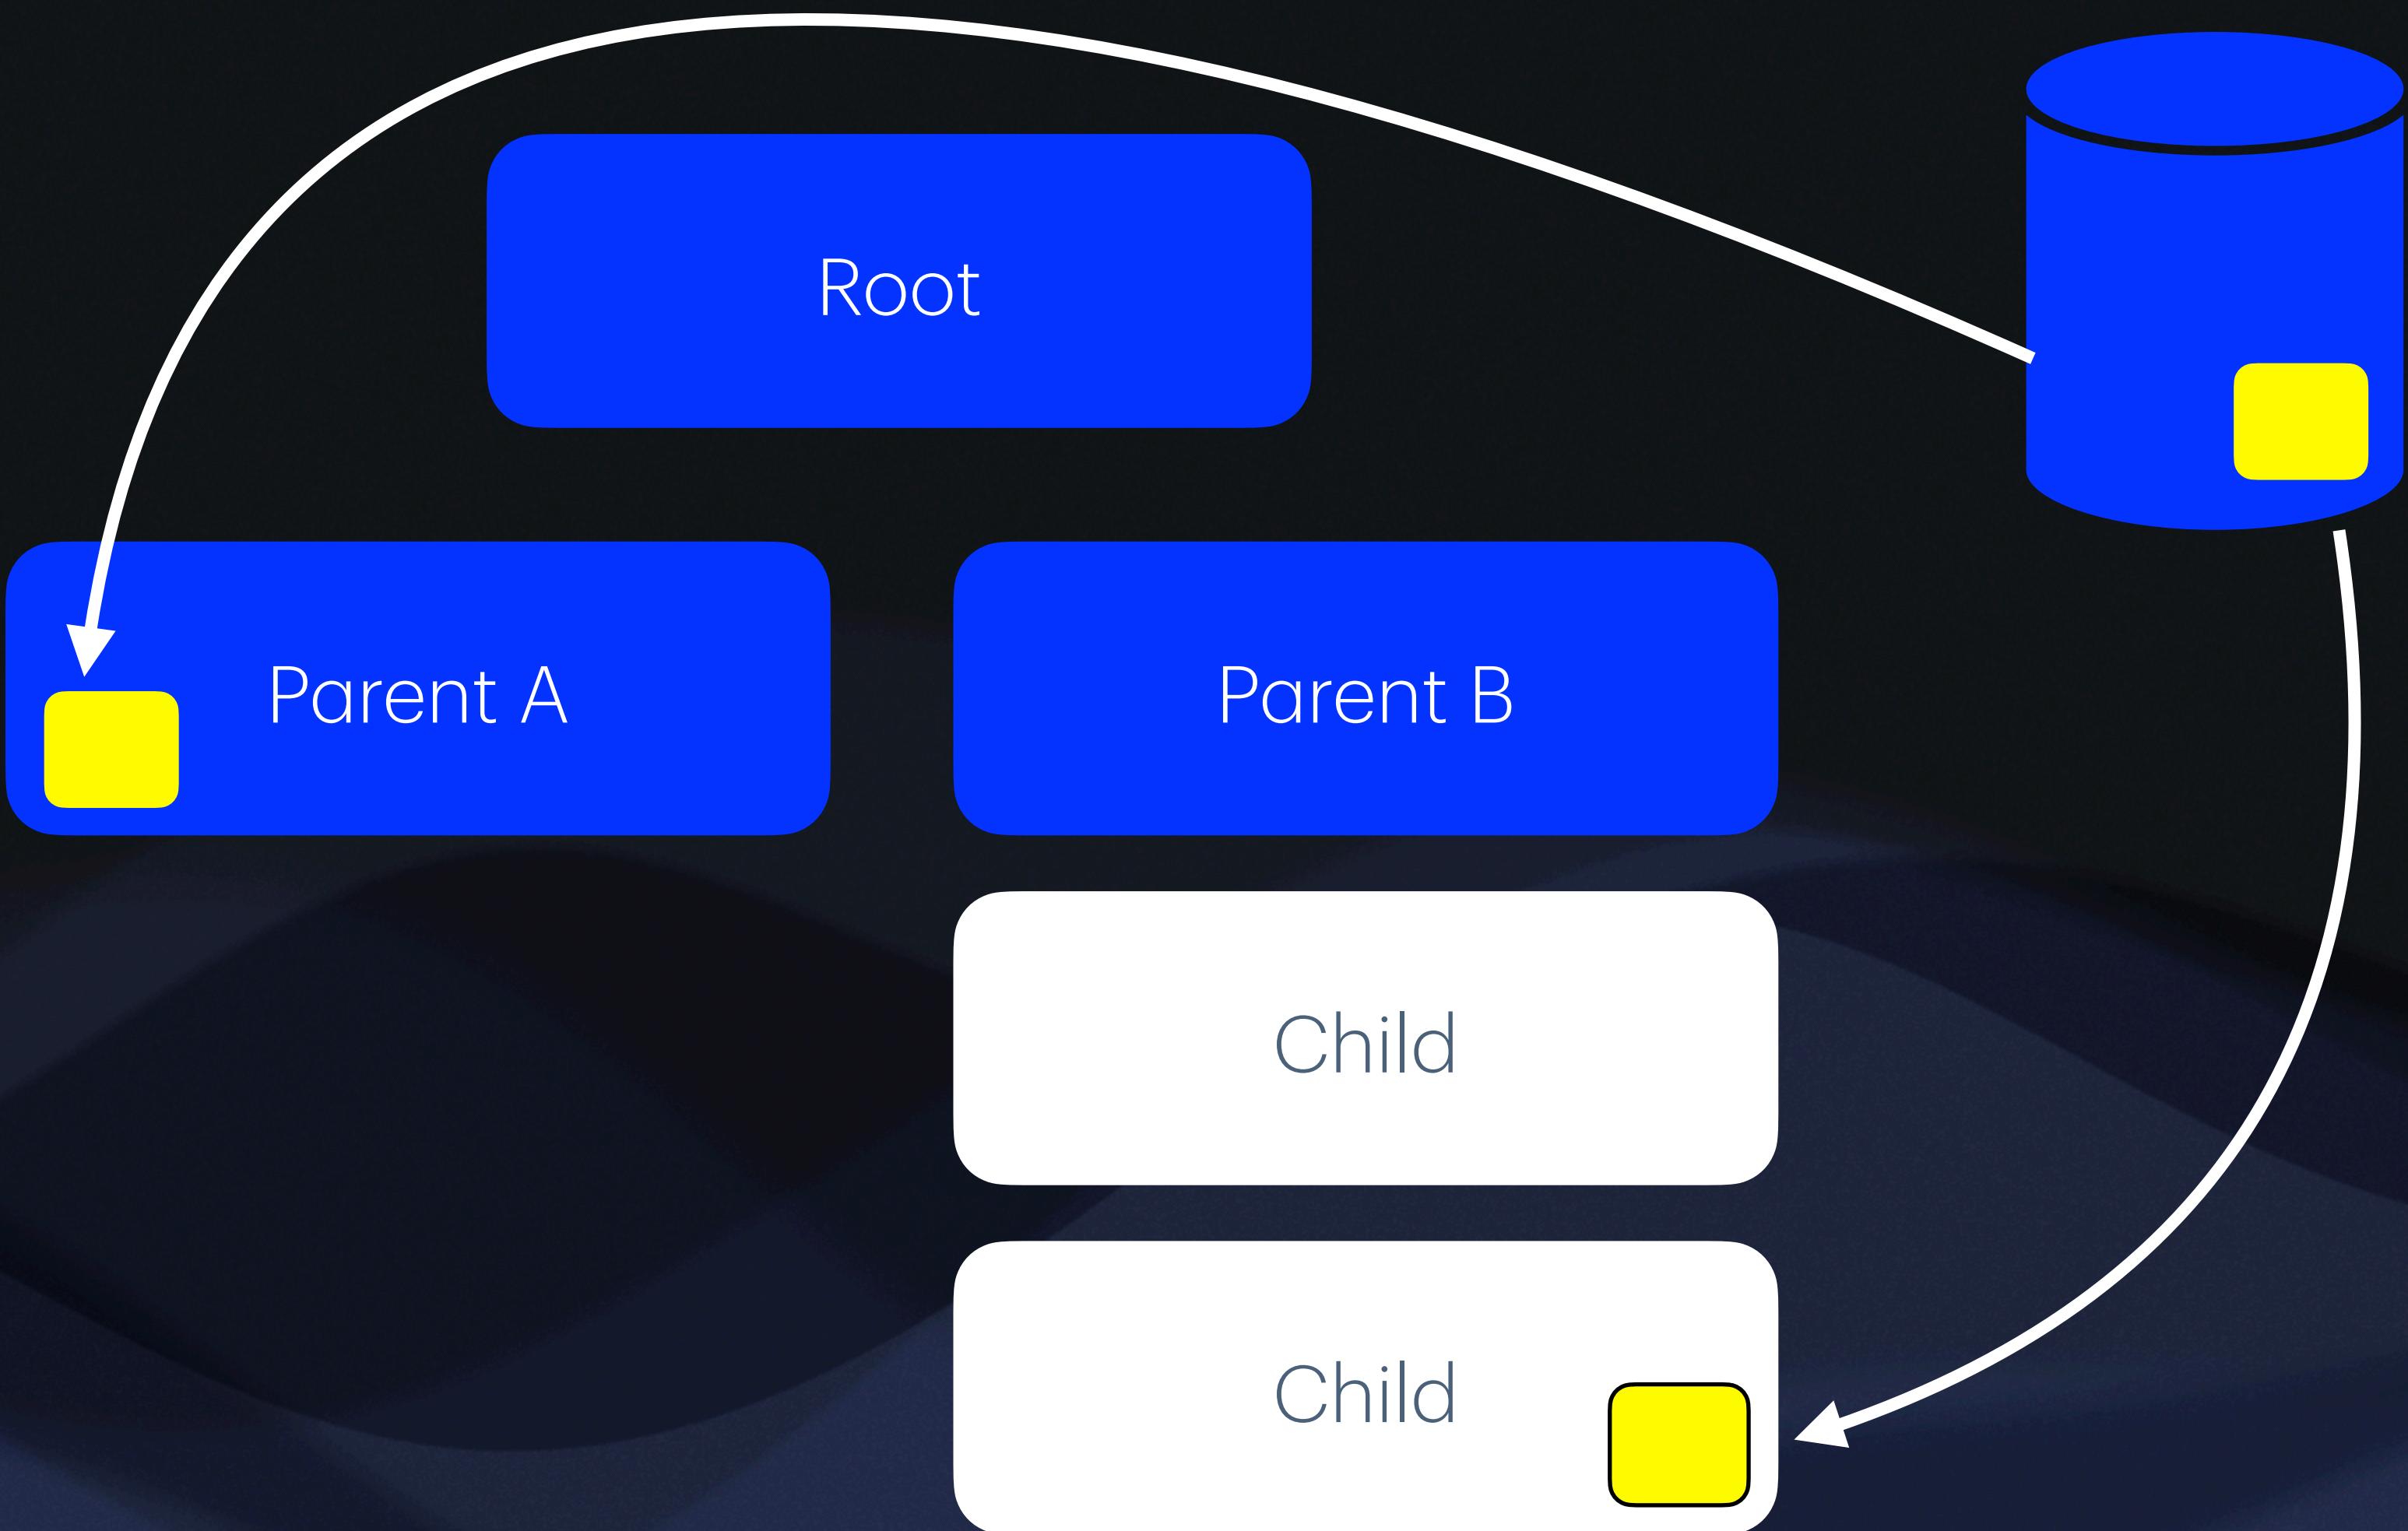

Prop drilling

Client side state options

- Prop drilling
- React context
- Redux
- MobX
- React Query
- Zustand

Zustand

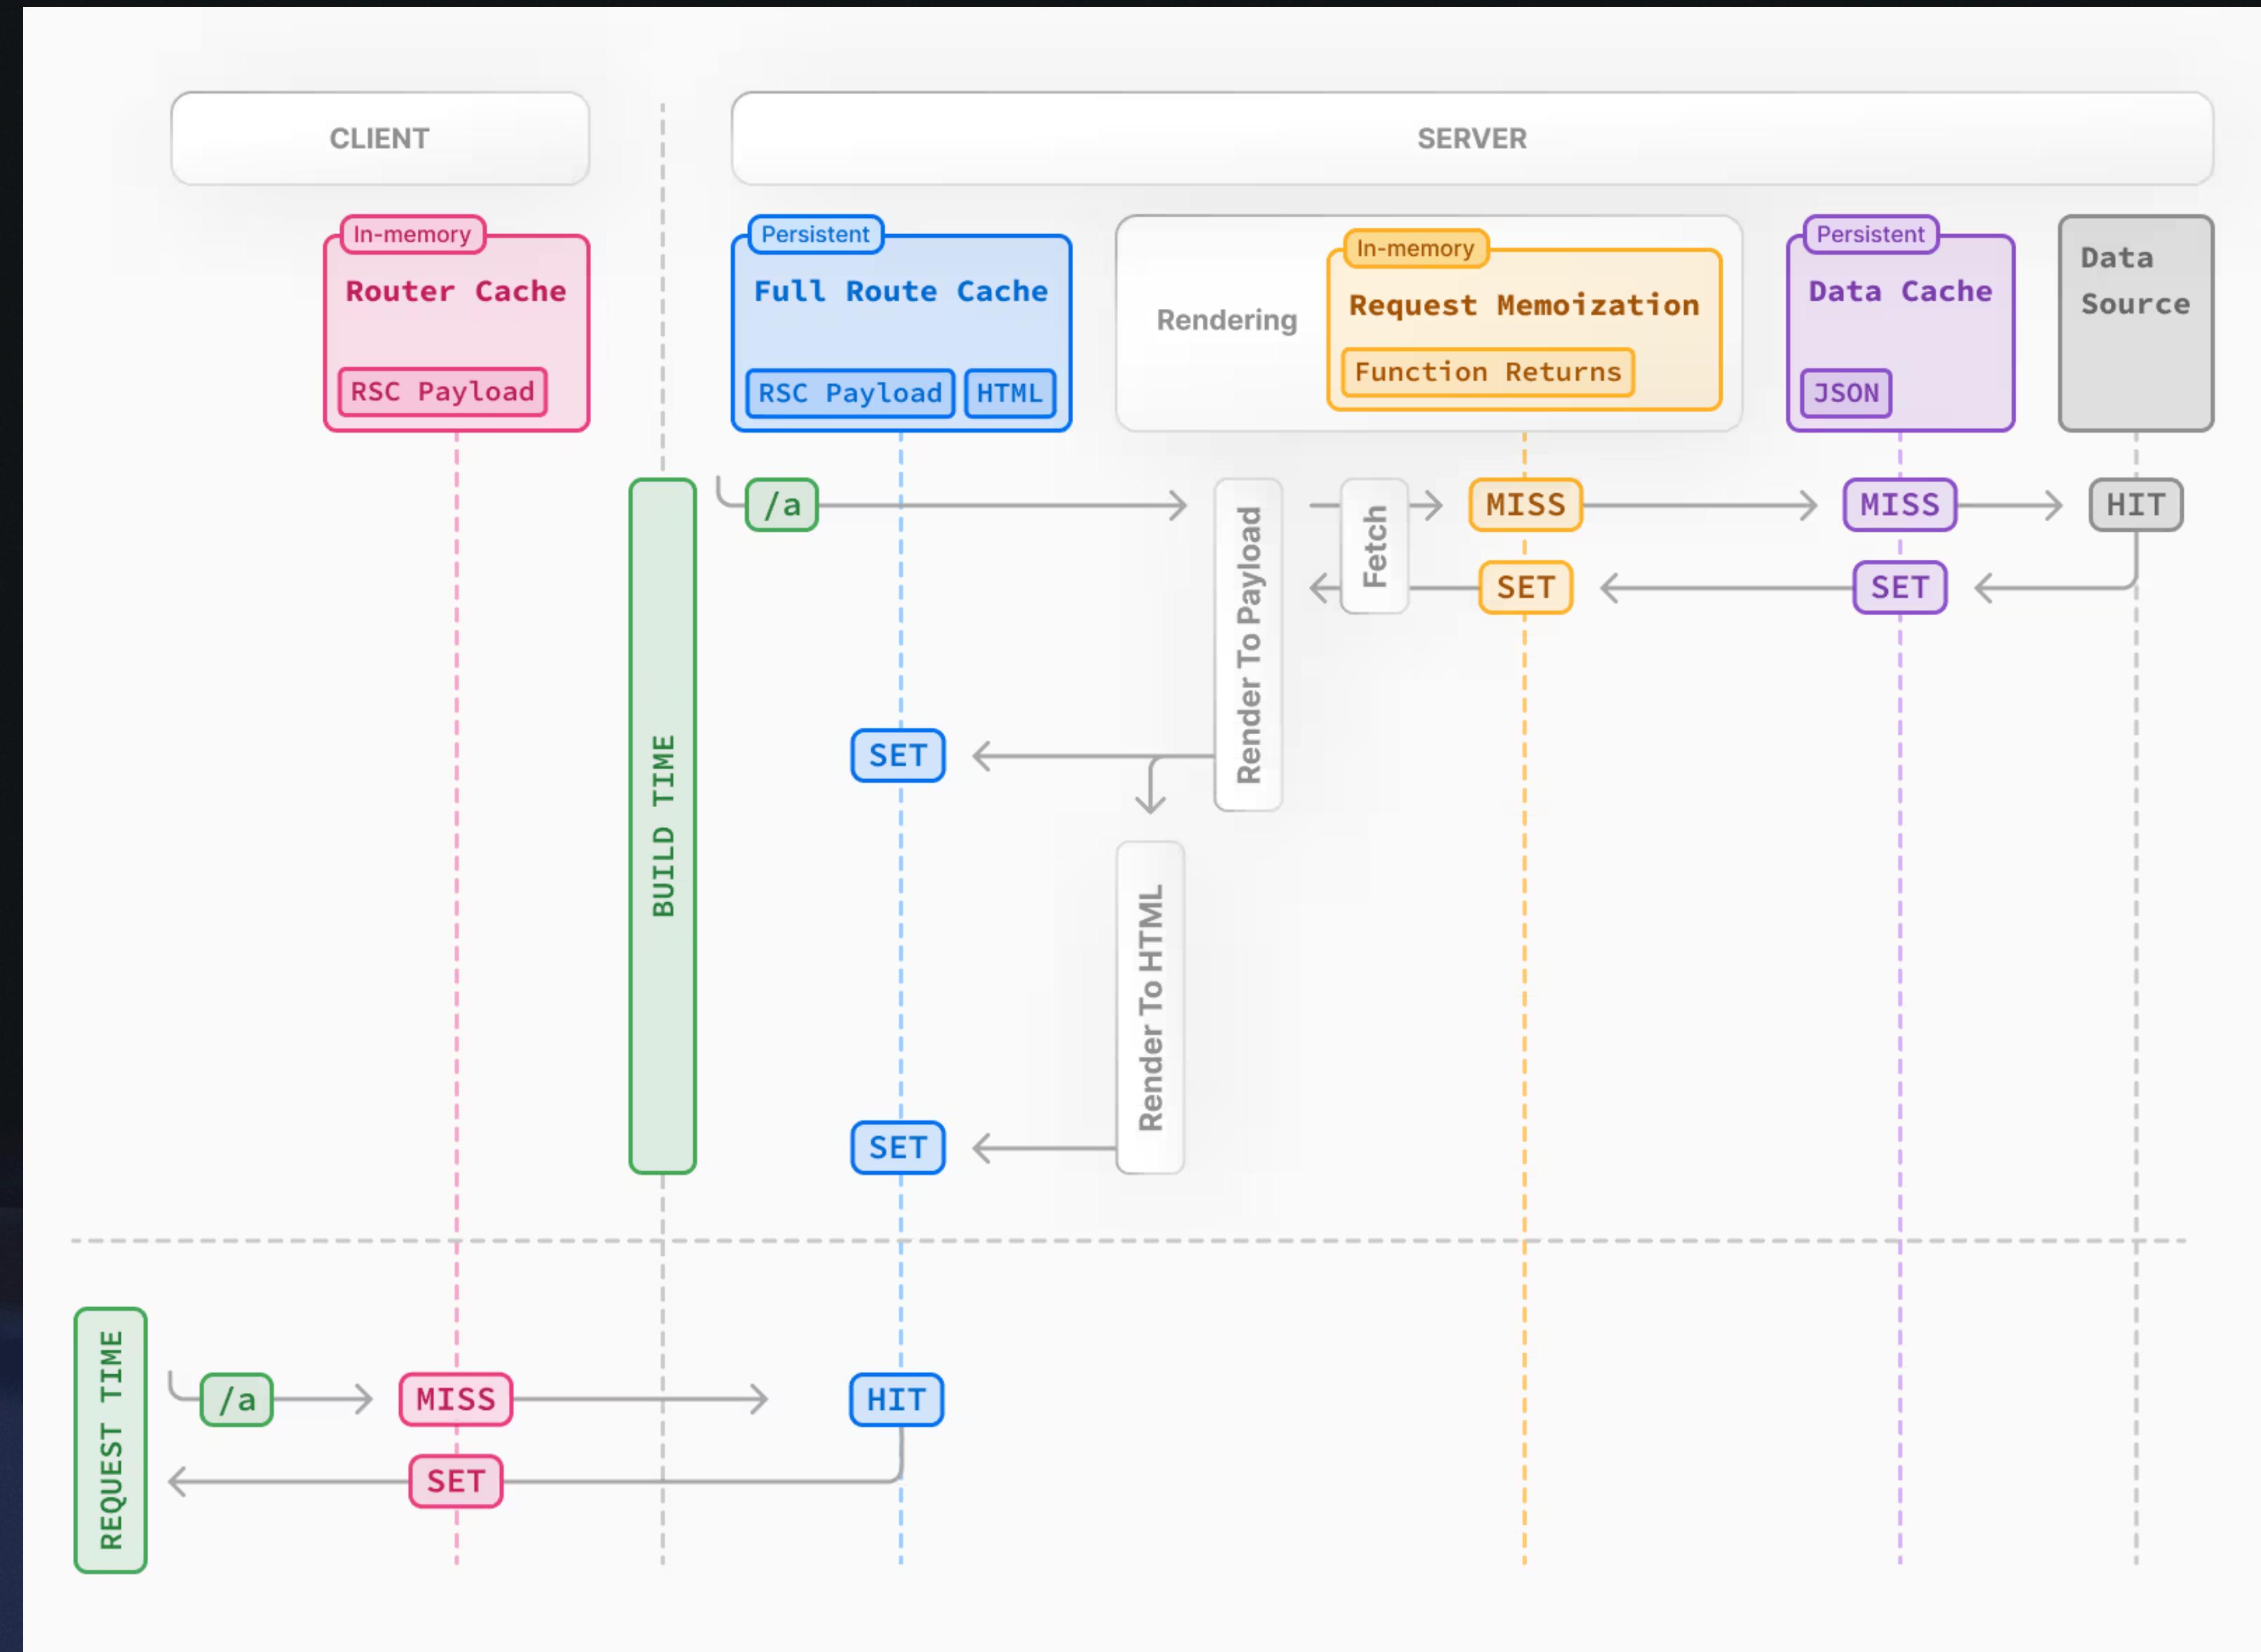

Nextjs Caching

Request
memoization
